## Certificate of Mold Analysis

Prepared for: STEPHANIE GOTTSCHALK  
Phone Number: (724) 935-1627  
Fax Number:  
Project Name: STEPHANIE GOTTSCHALK  
Test Location: 350 MANOR RD  
WEXFORD, PA 15090  
Report Number: 1666583  
Received Date: September 6, 2023  
Report Date: September 7, 2023

\_\_\_\_\_  
Diana Sauri, Laboratory Director or other approved signatory

Currently there are no Federal regulations for evaluating potential health effects of fungal contamination and remediation. This information is subject to change as more information regarding fungal contaminants becomes available. For more information visit <http://www.epa.gov/mold> or [www.nyc.gov/html/doh/html/epi/mold.shtml](http://www.nyc.gov/html/doh/html/epi/mold.shtml). This document was designed to follow currently known industry guidelines for the interpretation of microbial sampling, analysis, and remediation. Since interpretation of mold analysis reports is a scientific work in progress, it may as such be changed at any time without notice. The client is solely responsible for the use or interpretation. PRO-LAB/SSPTM Inc. makes no express or implied warranties as to health of a property from only the samples sent to their laboratory for analysis. The Client is hereby notified that due to the subjective nature of fungal analysis and the mold growth process, laboratory samples can and do change over time relative to the originally sampled material. PRO-LAB/SSPTM Inc. reserves the right to properly dispose of all samples after the testing of such samples are sufficiently completed or after a 7 day period, whichever is greater.

For more information please contact PRO-LAB at (954) 384-4446 or email [info@prolabinc.com](mailto:info@prolabinc.com)

ANALYSIS METHOD	Culture Sample	INTENTIONALLY BLANK	INTENTIONALLY BLANK	INTENTIONALLY BLANK
LOCATION	OLIVE BRANCH ROOM			
COC / LINE #	1666583 - 1			
SAMPLE TYPE	SETTLING - CONSUMER			
VOLUME	NA			
SERIAL NUMBER	None supplied			
COLLECTION DATE	Aug 25, 2023			
ANALYSIS DATE	Sep 7, 2023			

IDENTIFICATION	Mold Present									
Cladosporium	X									
Non-sporulating fungi	X									

TOTAL SPORES	NA									
MINIMUM DETECTION LIMIT	NA									

BACKGROUND DEBRIS	Not Applicable									
-------------------	----------------	--	--	--	--	--	--	--	--	--

OBSERVATIONS & COMMENTS										
-------------------------	--	--	--	--	--	--	--	--	--	--

Background debris qualitatively estimates the amount of particles that are not pollen or spores and directly affects the accuracy of the spore counts. The categories of Light, Moderate, Heavy and Too Heavy for Accurate Count, are used to indicate the amount of deposited debris. Light (None to up to 25% obstruction); Medium (26% to up to 75% obstruction); Heavy (76% to up to 90% obstruction); Too Heavy (Greater than 90% obstruction). Increasing amounts of debris will obscure small spores and can prevent spores from impacting onto the slide. The actual number of spores present in the sample is likely higher than reported if the debris estimate is 'Heavy' or 'Too Heavy for Accurate Count'. All calculations are rounded to two significant figures and therefore, the total percentage of spore numbers may not equal 100%. The effect of the results relate only to the items tested. The methods used in this analysis have been validated and is fit for the intended use. R "version" indicated after the lab ID# indicates a sample with amended data. PRO-LAB/SSPTM Inc. does not perform any sample collection. The information is supplied by the customer and can affect the validity of results. The results apply to the sample as received.

\* Minimum Detection Limit. Based on the volume of air sampled, this is the lowest number of spores that can be detected and is an estimate of the lowest concentration of spores that can be read in the sample. NA = Not Applicable.

Spores that were observed from the samples submitted are listed on this report. If a spore is not listed on this report it was not observed in the samples submitted.

Identification	Outdoor Habitat	Indoor Habitat	Possible Allergic Potential Not an opinion or interpretation	Comments
Cladosporium	The most common spore type reported in the air worldwide. Found on dead and dying plant litter, and soil.	Commonly found on wood and wallboard. Commonly grows on window sills, textiles and foods.	Type I (hay fever and asthma), Type III (hypersensitivity pneumonitis) allergies.	A very common and important allergen source both outdoors and indoors.
Non-sporulating fungi	Common everywhere.	Common on all surfaces.	None known.	This category is for cultured fungi only when spores are grown and do not form fruiting bodies or spores. Mostly, we believe that these are basidiospores that are capture in Andersen-type samplers.
